MARK:

LICENSED PRODUCT: **PETROLEUM REMEDIATION PRODUCT**
BIO SOCK, BIO BOOM, WELL BOOM, OIL BUSTER PRODUCTS

PRP can be spread over water or soil and will absorb, contain, and safely dispose of hydrocarbon pollutants. PRP is in essence hollow spheres of beeswax. These highly absorbent spheres immediately bind with any existing hydrocarbons and provide nutrients to naturally occurring microbes. The feeding microbes then create enzymes that biodegrade contaminants.

UniRem products using the PRP technology treat a range of contaminants in a wide variety of situations include the BioSok Bilge Maintenance System, the BioBoom, the WellBoom, and OilBuster.

LICENSED TERRITORY: **UNITED STATES OF AMERICA (DOMESTIC) AND INTERNATIONAL**
